PM versus control log₂FC; MLE and pointwise 95% CI

† Gene measured by MERFISH. Colors identify regional panels; functions are annotated in the source tables.
Hypothalamus:4 FA / 3 PM; cortex:4 PBS / 4 PM. q-ranked selection without animal deletion; intervals do not adjust for selection.

BH q<0.05 Exploratory: q≥0.05 Shrunken effect (not the MLE interval)
