Anterior cingulate cortex · measured slice and detection evidence
Zhuang-ABCA-2.023 · n=1,940 · median CCF AP=4.066 mm

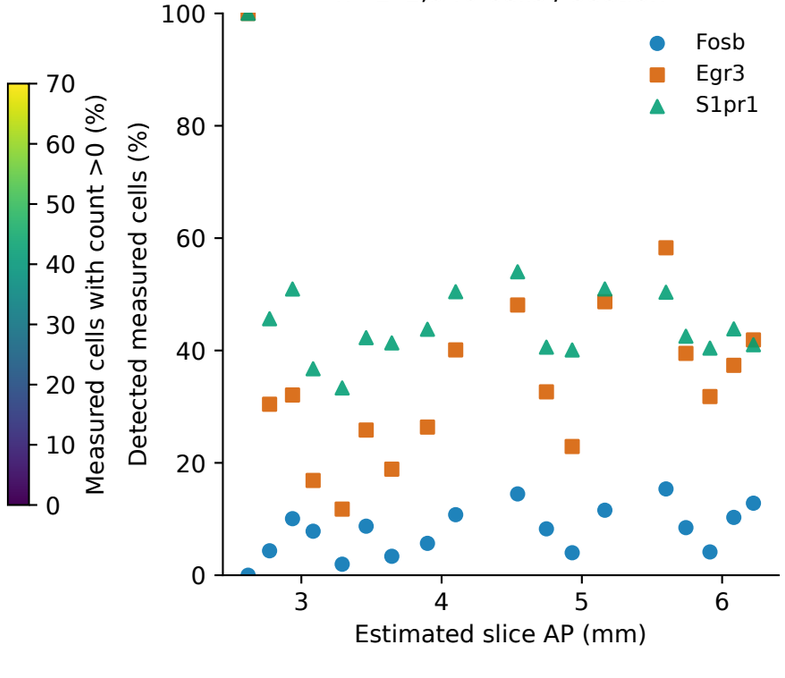

E Measured sections; no interpolation

One unexposed male reference animal. Gray points = measured zeros; positive points = raw count >0. No simulated PM2.5 values.
All cells enter each denominator; anatomy and section summaries use every regional cell, not only the example slice.
