Hypothalamus · measured slice and detection evidence
Zhuang-ABCA-2.034 · n=3,565 · median CCF AP=6.117 mm

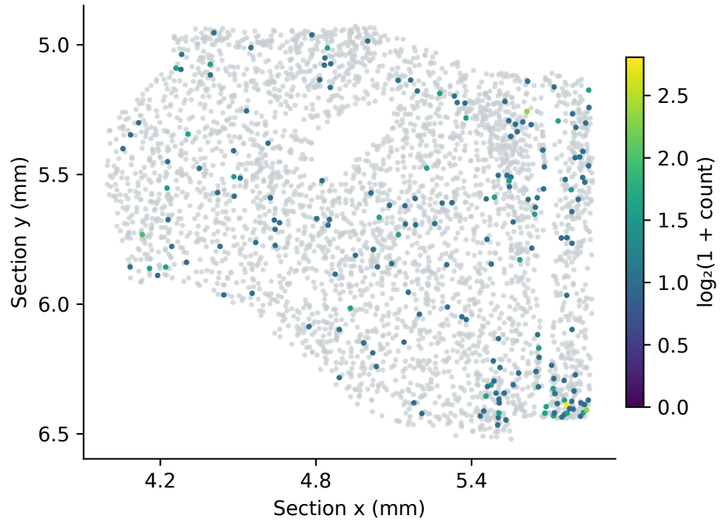

A Tll1 · 96/3,565 detected

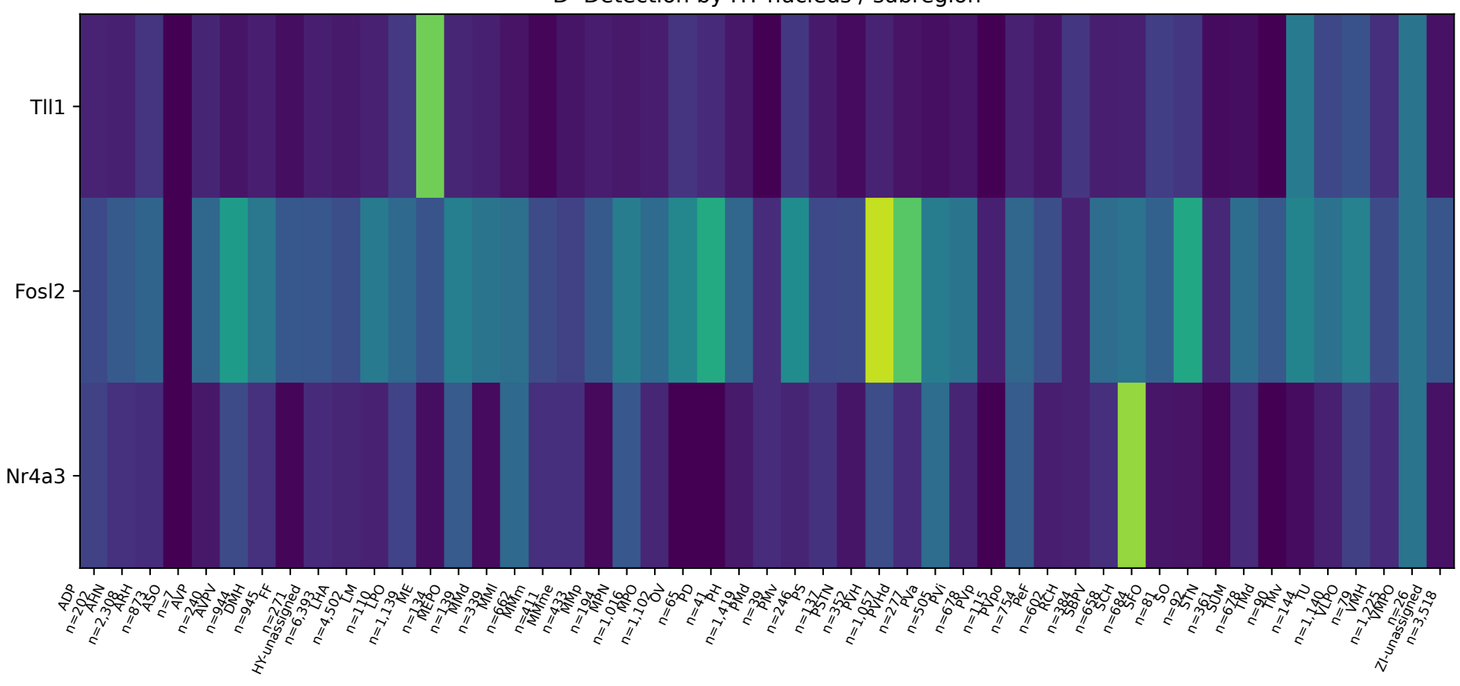

B Fosl2 · 372/3,565 detected

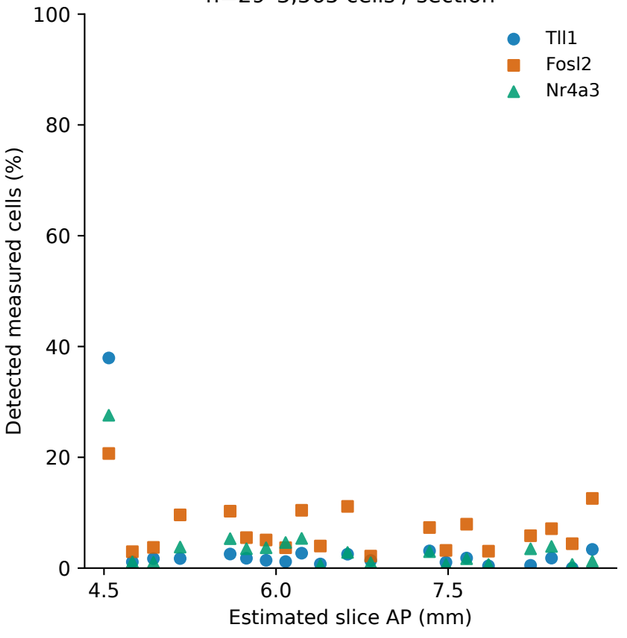

C Nr4a3 · 191/3,565 detected

D Detection by HY nucleus / subregion

E Measured sections; no interpolation
n=29–3,565 cells / section

One unexposed male reference animal. Gray points = measured zeros; positive points = raw count >0. No simulated PM2.5 values.
All cells enter each denominator; anatomy and section summaries use every regional cell, not only the example slice.
