GO Biological Process associations across six distinct contrasts

translation at synapse GO:0140241
cilium movement involved in cell motility GO:0060294
regulation of dendritic spine morphogenesis GO:0061001
regulation of dendrite morphogenesis GO:0048814
protein folding GO:0006457
regulation of response to endoplasmic reticulum stress GO:1905897
chromosome organization involved in meiotic cell cycle GO:0070192
membrane depolarization during action potential GO:0086010
detection of light stimulus GO:0009583
phototransduction GO:0007602
oxidative phosphorylation GO:0006119
mitochondrial translation GO:0032543
regulation of neuron migration GO:2001222
head morphogenesis GO:0060323
lens development in camera-type eye GO:0002088
homophilic cell-cell adhesion GO:0007156
negative regulation of myoblast fusion GO:1901740
proton motive force-driven ATP synthesis GO:0015986
microtubule bundle formation GO:0001578
response to interferon-beta GO:0035456
cytoplasmic translation GO:0002181
response to amphetamine GO:0001975
